Chris Senyek | Macro Research

Late Cycle Accounting Watchlist Series Pt.8

Chris Senyek introduced Pt.8 of his Late Cycle Accounting Watchlist Series this week: this rendition focusing on M&A activity, which may remain relatively elevated as companies look to support growth by looking for bargains amid lower than recent valuations. The full series highlights areas where aggressive accounting practices could occur that could mask deteriorating business fundamentals given the current macro environment.

In the current environment, Post M&A, management teams typically feel pressure to, and are incentivized to, improve combined earnings and reduce future expenses. M&A accounting contains a multitude of subjective management accounting decisions and thus creates the perfect storm for earnings management, which can many times lead to low earnings quality. Chris Senyek highlighted 10 items in turn that acquiring companies may use to "stack the deck" in their favor.

In the note, Senyek includes a list of companies that have added material goodwill and intangibles to their balance sheets and also screen as having low Earnings Quality.

Late Cycle Accounting Watchlist Series:

Part VII: Managing earnings via reserves.

Part VI: Margins and expenses, and improper cost capitalization.

Part V: A/P Reverse factoring and potential for hidden debt.

Part IV: Debt and some complications that may come up when assessing leverage risks.

Part III: Cash taxes which are likely increasing at this point in Cycle.

Part II: Non-GAAP EPS, impact of stock compensation, and intangible amortization.

Part I: Deeper look into inventory and inflation.

Largest Increase in Goodwill & Intangibles

Yin Luo | Quantitative Research

Multifactor Models in Cryptocurrency Market Webcast

Yin Luo and Wolfe QES discussed their suite of tools and models for the cryptocurrency markets via webcast this past week. You can watch a [Replay Here](#).

Luo and team start the webcast with a Cryptocurrency Primer and a broad overview of this emerging asset class, the underlying technologies and various ways to gain access. Next they elaborated on the three prototype Multifactor Models for Cryptocurrencies, which they published on late last year (a Fama-French type model, a statistical risk model, and a Bayesian VAR macroeconomic model). They detailed their Bella (Bitcoin Exposure Language Learning Analysis) model, which identifies public companies with significant exposures to the cryptocurrency market. Additionally, a top academic researcher in the crypto space demonstrated how to derive value from blockchain information for cryptocurrency investing. And lastly, a leading crypto data vendor walked through their on-chain datasets which can unveil fundamental analysis for crypto-assets.

Presenters included:

Yin Luo, Vice Chairman, Wolfe Research QES

Kai Wu, Research Associate, Wolfe Research QES

Yukun Liu, Assistant Professor of Finance, Simon Business School at University of Rochester

Cryptos as an Inflation Hedge?

- **Inflation-driven Rally:** On November 10, 2021, both Bitcoin and Ethereum rallied to all-time highs. Interestingly, their breakout levels occurred immediately after the release of the October CPI data.

Bitcoin Price Reaction

Ethereum Price Reaction

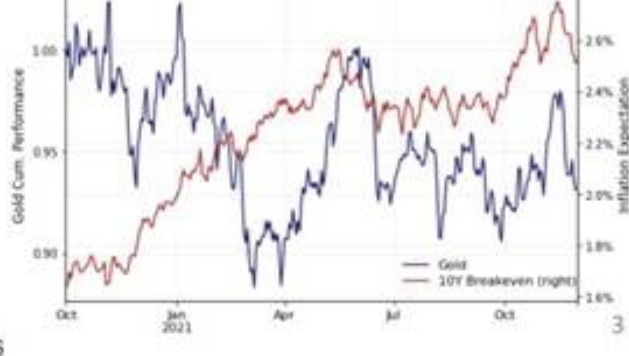

- **BTC Thrives while Gold Retreats:** (As of November 2021) Bitcoin price rallied five folds since October 2020, whereas our gold spot index has lost -7% during the same period. If we compare the price trends of both assets with the inflation expectation (represented by 10-year Breakeven Rate), obviously Bitcoin has been more correlated with inflation than gold, the traditional go-to asset for inflation hedging.

Bitcoin Performance, and Inflation

Rob Ginsberg | Technical Analysis

A Painful Waterfall

In Thursday's charts, Rob Ginsberg noted that high yield and leveraged loans continue to paint an ominous picture. Similarly, Industrial Metals charts seem to be pointing towards a growth scare, as failure to respond to oversold signals at support is always a concern. Copper and FCX seem to be heading towards a downturn, and Rob looks into what a market bottom could look like dependent on how the Fed reacts. Biotech is facing a test in resistance, but there's another buying opportunity in Energy and Rob looks at charts for COP, CTVA, and HES which are all attractive buying opportunities at the moment.

Growth Scare Next? The Sharp Break in Industrial Metals Seems to Be Sniffing Something Out
